SELF ASSESSMENT

Disclaimer

The analysis, data, and reports in CSET® are provided “as is” for informational purposes only. The Cybersecurity & Infrastructure Security Agency (CISA) does not provide any warranties of any kind regarding any information contained within. In no event shall the United States Government or its contractors or subcontractors be liable for any damages, including but not limited to, direct, indirect, special, or consequential damages and including damages based on any negligence of the United States Government or its contractors or subcontractors, arising out of, resulting from, or in any way connected with this report, whether based on warranty, contract, tort, or otherwise, whether injury was sustained from, or arose out of the results of, or reliance upon the report.

CISA does not endorse any commercial product or service, including the subject of the assessment or evaluation in this report. Any reference to specific commercial products, processes, or services by trademark, manufacturer, or otherwise, does not constitute or imply its endorsement, recommendation, or favoring by CISA.

The display of the CISA official seal or other CISA visual identities on this report shall not be interpreted to provide the recipient organization authorization to use the official seal, insignia or other visual identities of CISA. The CISA seal, insignia, or other visual identities shall not be used in any manner to imply endorsement of any commercial product or activity by CISA or the United States Government. Use of the CISA seal without proper authorization violates federal law (e.g., 18 U.S.C. §§ 506, 701, 1017), and is against CISA policies governing usage of the seal.

The report is prepared and intended for internal use by the organization that made the request. The contents of this report may be subject to government or private intellectual property rights. To request distribution of this report outside the organization for which it was prepared, contact the CSET Program Office. The contents of this report may be reproduced or incorporated into other reports, but may not be modified without the prior express written permission of the CSET Program Office.

Advisory

The Cyber Security Evaluation Tool (CSET®) is only one component of the overall cybersecurity picture and should be complemented with a robust cyber security program within the organization. A self-assessment with CSET® cannot reveal all types of security weaknesses, and should not be the sole means of determining an organization's security posture.

The tool will not provide a detailed architectural analysis of the network or a detailed network hardware/software configuration review. It is not a risk analysis tool so it will not generate a complex risk assessment. CSET® is not intended as a substitute for in-depth analysis of control system vulnerabilities as performed by trained professionals. Periodic onsite reviews and inspections must still be conducted using a holistic approach including facility walk-downs, interviews, and observation and examination of facility practices. Consideration should also be given to additional steps including scanning, penetration testing, and exercises on surrogate, training, or non-production systems, or systems where failures, unexpected faults, or other unexpected results will not compromise production or safety.

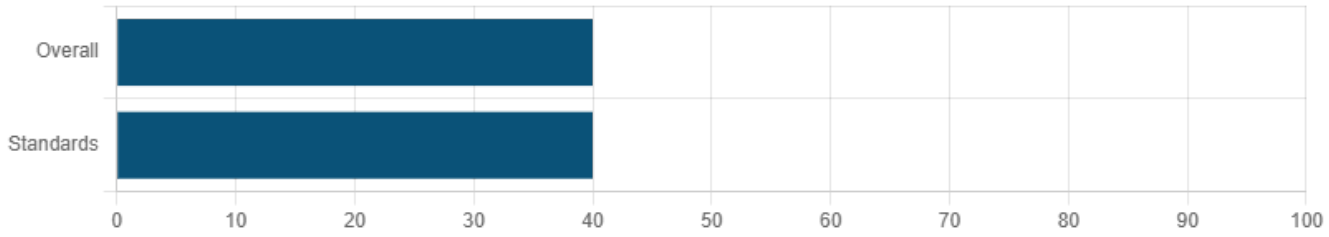
CSET® assessments cannot be completed effectively by any one individual. A cross-functional team consisting of representatives from operational, maintenance, information technology, business, and security areas is essential. The representatives must be subject matter experts with significant expertise in their respective areas. No one individual has the span of responsibility or knowledge to effectively answer all the questions.

Data and reports generated by the tool should be managed securely and marked, stored, and distributed in a manner appropriate to their sensitivity.

Site Information

Assessment Name	VCCC: Team 3 Group 3
Assessment Date	2/12/2026
Facility Name	TBD
City or Site Name	Los Angeles
State, Province, or Region	California
Principal Assessor Name	Logan
Additional Notes and Comments	
Contacts	

Summary Percent Compliance

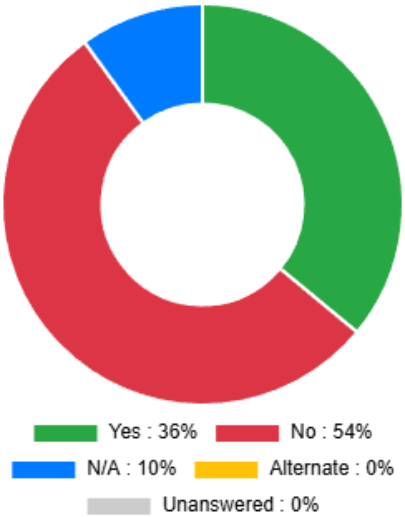


Executive Summary

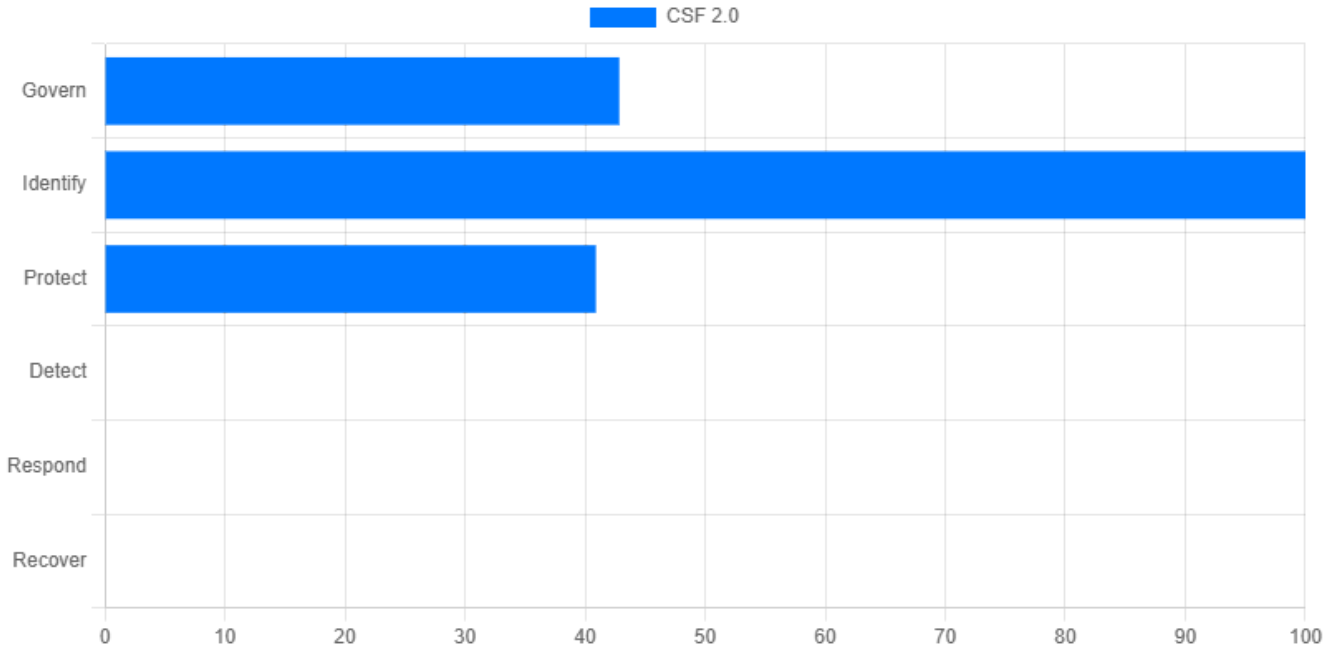
Cyber terrorism is a real and growing threat. Standards and guides have been developed, vetted, and widely accepted to assist with protection from cyber attacks. The Cyber Security Evaluation Tool (CSET) includes a selectable array of these standards for a tailored assessment of cyber vulnerabilities. Once the standards were selected and the resulting question sets answered, the CSET created a compliance summary, compiled variance statistics, ranked top areas of concern, and generated security recommendations.

Evaluation Against Selected Standards and Question Sets

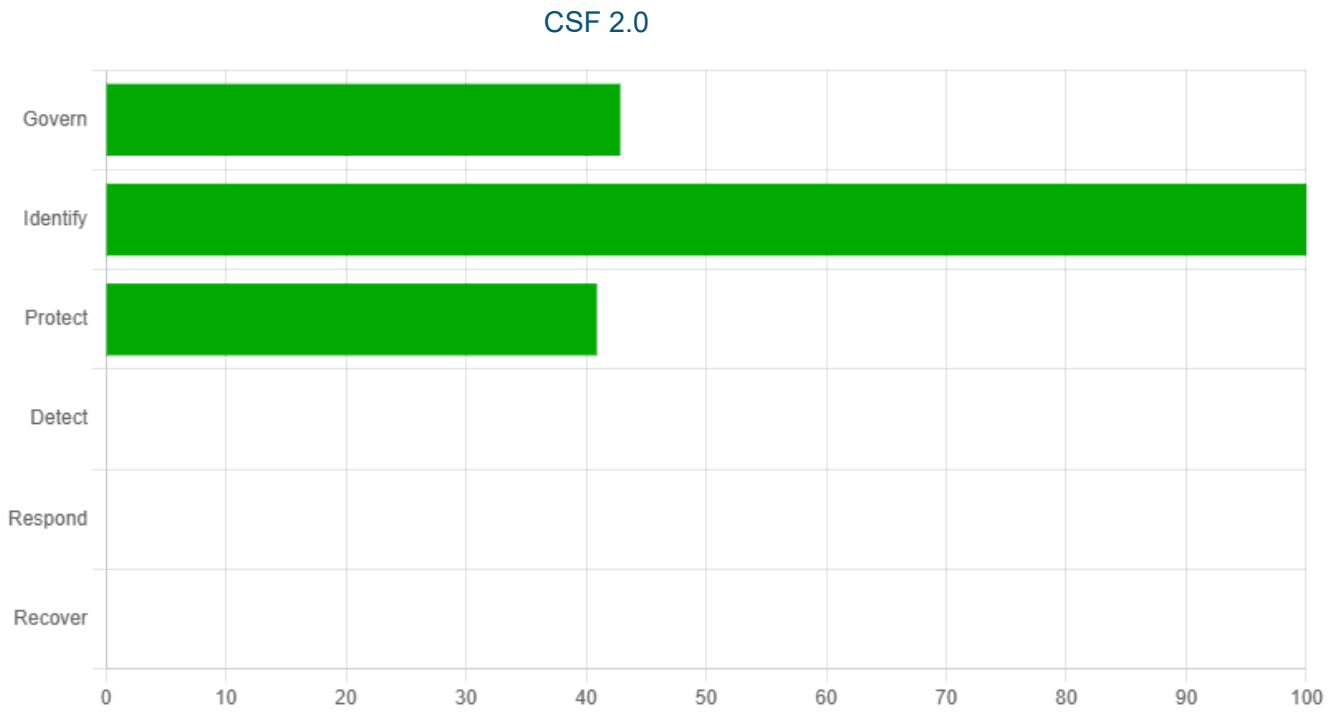
Standards Summary



Standard or Question Set



Standards Compliance



Security Assurance Level (SAL)

CALCULATED LEVEL

High

	Confidentiality	Integrity	Availability
Overall Values	Low	High	Moderate

FIPS 199 Security Assurance Level Guidance

NIST SP800-60 (FIPS 199) Based Security Assurance Levels with CNSS Special Factors

	Confidentiality	Integrity	Availability
Adjusted For System Questions	Low	High	Moderate
Information Type	Low	Low	Low

Type	Special Factors
Confidentiality

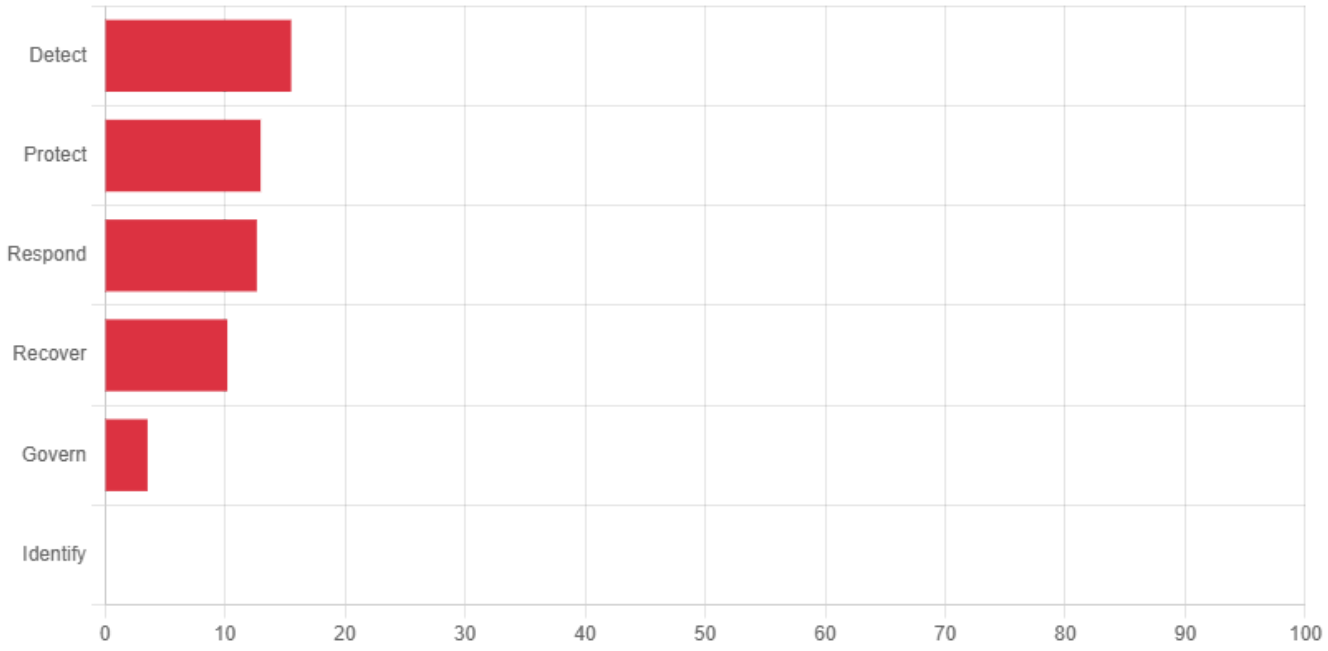
Ranked Categories

This chart ranks the top areas of concern based on a weighted risk score. The percentages are calculated by assigning higher weights to requirements that, if not implemented, would make the system more vulnerable to easier attacks. Lower weights are assigned to requirements associated with more difficult attacks.



Summary of Ranked Questions

Each question that did not meet the required Security Assurance Level (SAL) is shown in ranking order below. The displayed levels are the SALs applicable to that question. They are: Low (L), Moderate (M), High (H), and Very High (VH). CNSSI levels are for Confidentiality (C), Integrity (I), and Availability (A). DoD Instruction 8500.2 levels are for Confidentiality (Conf) and Mission Assurance Category (MAC). They are: Classified (C), Sensitive (S), and Public (P) for Confidentiality; MAC I, II, and III for Mission Assurance Category.

Rank: 1	Detect #DE.CM-01	Level: High
Networks and network services are monitored to find potentially adverse events		No

Rank: 2	Recover #RC.RP-01	Level: High
The recovery portion of the incident response plan is executed once initiated from the incident response process		No

Rank: 3	Detect #DE.CM-03	Level: High
Personnel activity and technology usage are monitored to find potentially adverse events		No

Rank: 4	Detect #DE.CM-06	Level: High
External service provider activities and services are monitored to find potentially adverse events		No

Rank: 5	Recover #RC.CO-03	Level: High
Recovery activities and progress in restoring operational capabilities are communicated to designated internal and external stakeholders		No

Rank: 6	Detect #DE.AE-02	Level: High

Potentially adverse events are analyzed to better understand associated activities		No

Rank: 7	Recover #RC.RP-03	Level: High
The integrity of backups and other restoration assets is verified before using them for restoration		No

Rank: 8	Respond #RS.CO-03	Level: High
Information is shared with designated internal and external stakeholders		No

Rank: 9	Detect #DE.AE-04	Level: High
The estimated impact and scope of adverse events are understood		No

Rank: 10	Recover #RC.RP-04	Level: High
Critical mission functions and cybersecurity risk management are considered to establish post-incident operational norms		No

Rank: 11	Respond #RS.CO-02	Level: High
Internal and external stakeholders are notified of incidents		No

Rank: 12	Detect #DE.AE-06	Level: High
Information on adverse events is provided to authorized staff and tools		No

Rank: 13	Detect #DE.AE-03	Level: High
Information is correlated from multiple sources		No

Rank: 14	Respond #RS.AN-03	Level: High
Analysis is performed to establish what has taken place during an incident and the root cause of the incident		No

Rank: 15	Respond #RS.MI-01	Level: High
Incidents are contained		No

Rank: 16	Respond #RS.MI-02	Level: High
Incidents are eradicated		No

Rank: 17	Recover #RC.RP-05	Level: High
The integrity of restored assets is verified, systems and services are restored, and normal operating status is confirmed		No

Rank: 18	Detect #DE.CM-02	Level: High
The physical environment is monitored to find potentially adverse events		No

Rank: 19	Protect #PR.AA-01	Level: High
Identities and credentials for authorized users, services, and hardware are managed by the organization		No

Rank: 20	Protect #PR.AA-02	Level: High
Identities are proofed and bound to credentials based on the context of interactions		No

Rank: 21	Protect #PR.AA-03	Level: High

Users, services, and hardware are authenticated	No

Rank: 22	Protect #PR.AA-04	Level: High
Identity assertions are protected, conveyed, and verified		No

Rank: 23	Protect #PR.AA-05	Level: High
Access permissions, entitlements, and authorizations are defined in a policy, managed, enforced, and reviewed, and incorporate the principles of least privilege and separation of duties		No

Rank: 24	Protect #PR.AA-06	Level: High
Physical access to assets is managed, monitored, and enforced commensurate with risk		No

Rank: 25	Protect #PR.PS-01	Level: High
Configuration management practices are established and applied		No

Rank: 26	Protect #PR.PS-04	Level: High
Log records are generated and made available for continuous monitoring		No

Rank: 27	Protect #PR.PS-05	Level: High
Installation and execution of unauthorized software are prevented		No

Rank: 28	Protect #PR.IR-01	Level: High
Networks and environments are protected from unauthorized logical access and usage		No

Rank: 29	Protect #PR.IR-02	Level: High
The organization’s technology assets are protected from environmental threats		No

Rank: 30	Protect #PR.IR-03	Level: High
Mechanisms are implemented to achieve resilience requirements in normal and adverse situations		No

Rank: 31	Protect #PR.IR-04	Level: High
Adequate resource capacity to ensure availability is maintained		No

Rank: 32	Detect #DE.AE-07	Level: High
Cyber threat intelligence and other contextual information are integrated into the analysis		No

Rank: 33	Detect #DE.AE-08	Level: High
Incidents are declared when adverse events meet the defined incident criteria		No

Rank: 34	Detect #DE.CM-09	Level: High
Computing hardware and software, runtime environments, and their data are monitored to find potentially adverse events		No

Rank: 35	Respond #RS.MA-01	Level: High
The incident response plan is executed in coordination with relevant third parties once an incident is declared		No

Rank: 36	Recover #RC.RP-02	Level: High
Recovery actions are selected, scoped, prioritized, and performed		No

Rank: 37	Respond #RS.MA-02	Level: High
Incident reports are triaged and validated		No

Rank: 38	Respond #RS.MA-03	Level: High
Incidents are categorized and prioritized		No

Rank: 39	Respond #RS.MA-04	Level: High
Incidents are escalated or elevated as needed		No

Rank: 40	Respond #RS.MA-05	Level: High
The criteria for initiating incident recovery are applied		No

Rank: 41	Respond #RS.AN-06	Level: High
Actions performed during an investigation are recorded, and the records' integrity and provenance are preserved		No

Rank: 42	Respond #RS.AN-07	Level: High
Incident data and metadata are collected, and their integrity and provenance are preserved		No

Rank: 43	Respond #RS.AN-08	Level: High
An incident's magnitude is estimated and validated		No

Rank: 44	Recover #RC.RP-06	Level: High
The end of incident recovery is declared based on criteria, and incident-related documentation is completed		No

Rank: 45	Recover #RC.CO-04	Level: High
Public updates on incident recovery are shared using approved methods and messaging		No

Rank: 46	Govern #GV.RM-01	Level: High
Risk management objectives are established and agreed to by organizational stakeholders		No

Rank: 47	Govern #GV.RM-02	Level: High
Risk appetite and risk tolerance statements are established, communicated, and maintained		No

Rank: 48	Govern #GV.RM-03	Level: High
Cybersecurity risk management activities and outcomes are included in enterprise risk management processes		No

Rank: 49	Govern #GV.RM-04	Level: High
Strategic direction that describes appropriate risk response options is established and communicated		No

Rank: 50	Govern #GV.RM-05	Level: High
Lines of communication across the organization are established for cybersecurity risks, including risks from suppliers and other third parties		No

Rank: 51	Govern #GV.RM-06	Level: High
A standardized method for calculating, documenting, categorizing, and prioritizing cybersecurity risks is established and communicated		No

Rank: 52	Govern #GV.RM-07	Level: High
Strategic opportunities (i.e., positive risks) are characterized and are included in organizational cybersecurity risk discussions		No

Rank: 53	Govern #GV.SC-03	Level: High
Cybersecurity supply chain risk management is integrated into cybersecurity and enterprise risk management, risk assessment, and improvement processes		No

Rank: 54	Govern #GV.RR-01	Level: High
Organizational leadership is responsible and accountable for cybersecurity risk and fosters a culture that is risk-aware, ethical, and continually improving		No

Rank: 55	Govern #GV.RR-02	Level: High
Roles, responsibilities, and authorities related to cybersecurity risk management are established, communicated, understood, and enforced		No

Rank: 56	Govern #GV.PO-01	Level: High
Policy for managing cybersecurity risks is established based on organizational context, cybersecurity strategy, and priorities and is communicated and enforced		No

Rank: 57	Govern #GV.PO-02	Level: High

Policy for managing cybersecurity risks is reviewed, updated, communicated, and enforced to reflect changes in requirements, threats, technology, and organizational mission	No
